

Eden Biopharm Ltd

A Media Backgrounder

Eden Biopharm Ltd was established in June 2000 as an independent development solutions company. They assist their clients in developing successful biopharmaceutical products, by working with them to overcome the technical, regulatory and logistical hurdles, in order to reduce the time to market.

Based on the successful delivery of effective solutions, the company has quickly grown and now has a broad client base of over 50 different biotech and pharmaceutical organisations that extend to companies in Asia, Australasia and the USA.

All key members of the consultancy team have operated in senior positions in both the biotech and pharmaceutical sectors of the industry, in a variety of scientific and business development roles, giving the collective team a level of expertise and knowledge that is currently unmatched in the biopharmaceutical industry.

They have expert understanding of the regulatory and commercial requirements, having taken complex biopharmaceuticals from the earliest stages of development, all the way through to successful license application.

Their proposition is to offer Eden's collective breadth and depth of expertise to allow clients to get their products right by the application of good science from day one, at the start of the development process, thus saving time and money whilst maximising product value and potential.

Eden Biodesign Ltd

Eden Biodesign Ltd is sister company to Eden Biopharm Ltd. Due to their extensive expertise and market credibility in all aspects of biopharmaceutical manufacturing, Eden Biodesign was appointed via competitive tender to run the UK National Biomanufacturing Centre, a major Government-funded initiative (see attached backgrounder for more details on NBC).

In everything they do, Eden promise their clients their committed service, along with the use of their knowledge and expertise, to guide clients through the process development, manufacturing, regulatory and technology transfer challenges. Their promise is threefold:

- ***Design*** best practice at every step of biopharmaceutical development programmes and processes
- ***Develop*** ideas, potential and research products into the reality of valuable biopharmaceutical medicines
- ***Deliver*** product and processes with the application of their commercial experience, facilities and commitment

Key Contacts

Dr Crawford Brown *BSc, PhD*: Chief Executive Officer

Crawford established Eden Biopharm with co-founder Derek Ellison. Previously he was Director of Product Development for Celltech-Medeva, responsible for managing the development and manufacturing aspects of the Medeva Group biotech product pipeline, from early phase acquisition through to in-market supply. Among his achievements Crawford managed and led a successful pan-European submission for a complex recombinant vaccine, which included an EMEA-sponsored pre-approval inspection. Prior to this, he held development positions at British Biotech and Wellcome Biotech. Crawford is also a visiting lecturer in Modular Training for the Bioprocess Industries, University College London.

Dr Derek Ellison *BSc, PhD*: Senior Business Development Director and Analytical Consultant

Prior to leading the business development activities within Eden, Derek was Biochemistry Development Manager at Medeva Development. He holds extensive expertise and has consulted to major biopharmaceutical companies in the areas of analytical testing, QC, validation, regulatory documentation, GMP manufacturing and systems, plus validation and technology transfer. Derek conducted his Post-Doctoral studies at the Wellcome Centre for Cell Matrix Research.

Key team members:

Dr Anita Bate <i>MSc PhD</i>	Product Development
Mrs Heather Francieczek	Clinical Trial Supply
Mr Simon Routledge <i>BSc MSc</i>	Process and Validation
Mr Kenneth Hart <i>QP</i>	QA, Validation and QC
Dr Derek Ellison, <i>BSc PhD</i>	Business Development
